## FliteHaus Creative Agency – Mid 2014

As an intern at FliteHaus (whom are now known as Thrive Creative Labs), I was given a set of responsibilities spanning across print design, web design and frontend web development. Tasks included designing print ads, restaurant table coasters, and optimizing page load times. I gained experience working with Drupal, managing tight deadlines, and meeting with clients.

## Push. – Early 2015–Present

Hired as a web developer, my time at Push in Orlando has been vibrant and extremely valuable. Job title aside, my responsibilities often went beyond development, having the opportunity to expand into analytics, SEO, devops, web design, photography, and video editing. In these past two years, I went from having a basic but solid grasp of HTML5, CSS, and JavaScript to spearheading ambitious projects with major clients, gradually becoming a de facto full stack developer. Major projects include an an isomorphic Canvas/WebGL web app for Publix, designing the website of a private university with a 4,000+ enrollment, and fusing WordPress with Node.js for a progressive web app for Sonny's BBQ, which utilizes Vue, server-side rendering, Service Workers, and bundling with Webpack.

Git (Agile-esque workflow)

UNIX Terminals (Linux/MacOS)

CSS/SASS/Stylus

Bootstrap, Bulma

SEO (AMP, Structured Data, OpenGraph)

Javascript (ES6/7)

Vue.js, React.js

WebGL/Canvas (Pixi.js)

Responsive Email Development

Shopify

WordPress (ACF Pro, REST API)

Node.js

Vagrant, Docker, Kubernetes

Webpack, Browserify, Gulp, Grunt
